

I was a Master student of Environmental and Resource Management in Esbjerg and graduated in June 2016. As part of my thesis, which investigated the factors influencing fishery discards, I spent six months in Iceland at the University of Akureyri. This stay would not have been possible without the UArctic scholarship and I am grateful that I got the opportunity to make this wonderful and unique experience. As an exchange student I could not only broaden my knowledge on environmental issues in the Arctic but I even got the chance to go on a research fishery boat where I identified, gutted and filleted fish.
