

# Quick Guide to Green Open Access

This guide helps you make your research publications open access when you **have not** published with an open access publisher or otherwise paid for open access.

Green open access means self-archiving a version of your article in Pure or another repository. According to the SDU Open Science Policy you should archive your accepted manuscript version in Pure.

## What is an accepted manuscript

Most journals allow you to upload an earlier version of your article to your institutional repository. How and when an accepted manuscript can be uploaded is most times part of the publisher’s standard policy. This is also included in the copyright transfer agreement you sign with the publisher.

→An accepted manuscript is a peer reviewed manuscript of your article. When the manuscript is ultimately accepted after peer review corrections, your latest version is the accepted manuscript. This might be a word document you have on your computer – make sure you chose the right file name for your final manuscript!

Once you have located the peer reviewed manuscript we recommend that you send it to the Pure Office while clearly stating that it is the peer reviewed manuscript you are sending.

## **What happens after I send my manuscript to the Pure office?**

Copyright terms are journal and publisher dependent. We at the Pure Office will consult the copyright terms of the journal and investigate when terms are unclear. The relevant policies are stated under 'Self archiving policy' or 'Green open access policy'.

Your manuscript will most times be subject to an embargo period. This means that we will upload your manuscript to Pure at once but public access to the document is given later. The embargo period can vary greatly.

If you have questions regarding Open Access and Pure or would like to know which of your articles you can pursue green open access with we are ready to help at [puresupport@bib.sdu.dk](mailto:puresupport@bib.sdu.dk).
