

Physics Mentor program

- the 1st year of your studies

The SDU Physics mentor program is here to support you in your first year of studies and help you build a network of fellow physicists!

Our goals are to make your studies more fun and to help with the challenges all new students face – perhaps classes do not match their initial expectations, they find the material challenging, or they need time-management support.

We will also provide guidance on the next years of your studies and on how to apply your skills in your future physics career in business, research or teaching.

The program is completely voluntary, but we encourage you to join a community of people who are all enthusiastic about physics.

Your mentor:

After enrolling in physics at SDU you can pick a mentor among our staff mentor list on which you'll find some information regarding their research topics and why they decided to become a mentor.

Together you schedule meetings and decide what topics or issues to discuss. You can switch your mentor at any time without having to provide an official reason.

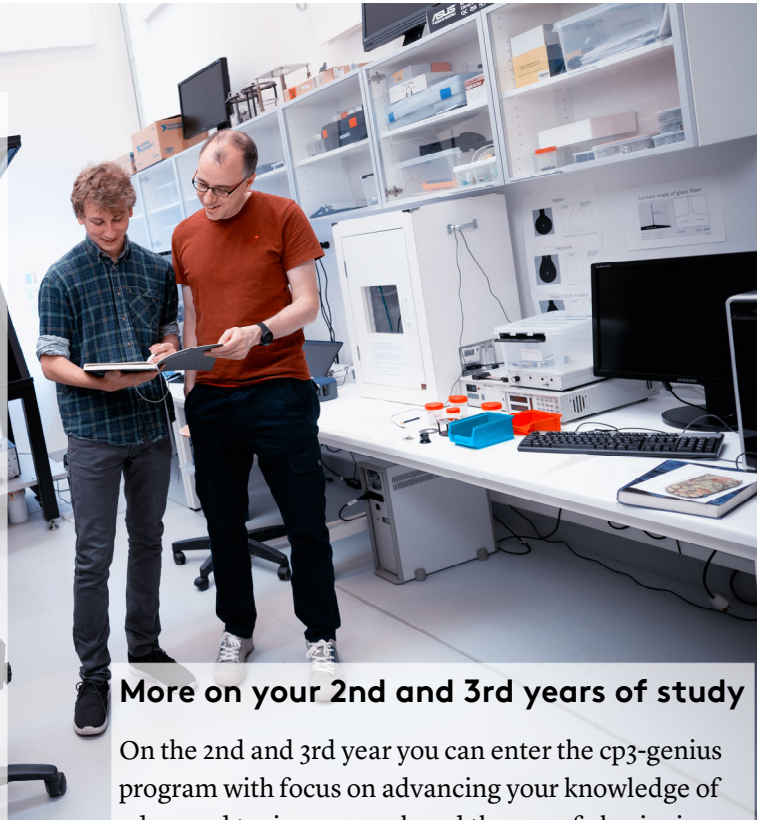

Also remember you can always come to the office of your mentor or any other staff to ask questions outside these meetings!

Social activities:

We meet all together over pizza and other events here at SDU. Sometimes we organize science events in the city like Beer & Science events at Studentarhuset Physics Film Festivals and more. We will bring you along to those as well.

Homework cafés:

As part of our support we will organize homework cafés to help you prepare for your exams.

More on your 2nd and 3rd years of study

On the 2nd and 3rd year you can enter the cp3-genius program with focus on advancing your knowledge of advanced topics, research and the use of physics in business and to tackle Grand Challenges.

Also keep a lookout for

Our student organized Æter talks where physics staff present their research.

You can see some of the many careers our students are engaged in, at our careers pages
