TORCH at Kieler Woche 2026 – Science, Art, and the Sea 21–23 June 2026 | Kieler Woche – “kieler uni live”, below Seeburg

Once again, this year, TORCH will be part of Kieler Woche – and we are delighted to be involved in this unique summer festival. Over the course of three days, our project partners from Kiel, together with Newtec from Odense, will present the hyperspectral camera and demonstrate in an accessible way how this technology can be used to reveal hidden details and secrets in paintings.

You will find our stand in the “kieler uni live” area below Seeburg. This year, we are working closely with Kiel Nano, Surface and Interface Science (KiNSIS) as well as the Cluster of Excellence ROOTS (Archaeology). Visitors will have the opportunity to experience first-hand how modern imaging technologies, nanoscience, and archaeology come together to open up new perspectives on art and cultural heritage.

Taking part is doubly worthwhile:

Kieler Woche is not only one of the world’s largest sailing events, but also Germany’s biggest summer festival. Alongside international regattas, visitors can enjoy a wide-ranging programme of culture and science, including concerts, exhibitions, family activities, and open-air events throughout the city.

👉 **You can find the full Kieler Woche programme here:**

We warmly invite you to stop by, ask questions, experience science up close, and engage in conversation with us.

We look forward to welcoming you!
