

Dear all,
(please help by forwarding to relevant recipients)

We would like to invite you to an interesting talk by docent Hans Blom with the topic “Nanoscale Kidney Pathology”.

Hans Blom is docent at the KTH, Royal Institute of Technology in Stockholm and Facility Head at the Advanced Light Microscopy Support at SciLifeLab.

Hans Blom is an expert in super-resolution fluorescence microscopy and its applications in life science. He is presently focusing on imaging of kidney morphology across scale with the aim to improve our understanding of kidney filtration and pathophysiology. His approach, combining optical clearing and super-resolution fluorescence imaging, offers insights into nanoscale kidney structures, which could lead to enhanced clinical applications and treatment strategies for renal diseases.

For more about Hans Blom, visit: [SciLifeLab](#) and [KTH](#).

Best wishes,
The Brewer Group
