BMB Seminar room, University of Southern Denmark

Proteomics applied in Pharmacology at University of Pretoria

Professor Duncan Cromarty

This general talk will cover some of the aspects of the research carried out at the University of Pretoria with the use of proteomics especially mass spectrometer based techniques and the experiences of the group.

Areas covered relate to several aspects in Malaria research, wound healing with emphasis on extracellular matrix, characterisation of decellularised skin, tumour extracellular matrix, 2D and 3D hepatocyte cultures and iPSC derived hepatocyte like cells.

The talk will be on the general approaches and some of the problems experienced along the path of proteome research.

Host: Prof. Ole Nørregaard Jensen
