

Centre for Human Interactivity (HUM)  
Invites to a research seminar on

# Between species, between disciplines: ecolinguistic, anthropological, and biological perspectives on inter-species interaction

Monday 12th of May 2025, 13.00 – 15.30

In the  
**DIAS seminar room**

**Malene Friis Hansen (Princeton University):**

Towards a Cultural Biology: A transdisciplinary exploration of human-other-primate relations

**Gavin Lamb (NHH Norwegian School of Economics, Bergen):**

Multispecies language landscapes: Monk seal-human interaction in Hawai'i

**No registration needed**

This research seminar explores the complex interactions between human beings and other species through an interdisciplinary lens, examining how we communicate, coexist, and create meaning across species boundaries in the Anthropocene era. As human activity increasingly reshapes planetary systems, understanding these inter-species relationships becomes crucial for navigating our shared ecological future. This seminar bridges ecological linguistics, anthropology, and biology to explore how species interact, communicate, and adapt to each other in an age where human influence permeates even the most remote natural environments.

Join us for presentations by leading researchers in the interdisciplinary study of inter-species interaction:
