

## **DIAS-MoCS Visiting Junior Fellowships in Applied Phenomenology**

Up to three junior fellowships are available for early career researchers in philosophy who are interested in integrating phenomenology with qualitative research methods. Fellows will be hosted for a one-month stay by the Danish Institute for Advanced Study (DIAS) and the research unit, Movement, Culture and Society (MoCS), which is based in the Department of Sports Science and Clinical Biomechanics at University of Southern Denmark (SDU). **The primary purpose of the fellowship is to mentor and support early career researchers through the process of writing applications for externally funded post-doctoral positions to work at DIAS and MoCS.**

By drawing on approaches developed in the humanities and social sciences—especially phenomenology, ethnography, and cultural analysis—members of MoCS study embodied experiences and movement practices in sports, health, and performing arts. Our research covers a diverse array of topics, such as cultural practices among elite and amateur athletes and dancers, the nature of musical expertise, and embodied experiences in illness and disability. Despite this broad range of topics, our research is unified by a sensitivity to situation and context: We consider how socio-cultural factors shape the concrete practices and experiences that we investigate. Our faculty have academic backgrounds in sports science, anthropology, the cognitive sciences, and philosophy.

DIAS is an elite research center at SDU with a focus on interdisciplinary collaboration. It includes members from all five faculties and hosts weekly talks by leading researchers from across all academic disciplines. More information about DIAS can be found [here](#).

During their stay, the fellows' primary host will be Anthony Vincent Fernandez, Assistant Professor of Applied Philosophy at DIAS & MoCS. However, applicants should identify at least one additional member of MoCS who they would like to work with when drafting applications for external funding (links to individual faculty pages are included below). Fellows will be provided with workspace at both DIAS and MoCS and will be able to participate in additional events taking place during the fellowship period. Ideally, the fellowship period will overlap with MoCS' [PhD course](#) on phenomenology and qualitative research methods (May 31<sup>st</sup> to June 3<sup>rd</sup>, 2022). However, it is possible to schedule an alternative fellowship period.

**Eligibility:** Applicants should be near completion of their PhD or received their PhD in the last four years, as of Jan.1<sup>st</sup>, 2022. The eligibility period can be extended for career breaks. (Note: The fellowship is intended for international applicants. If you are based in Denmark and would like to arrange a research stay at MoCS, you are welcome to get in touch to discuss alternative arrangements.)

**Award:** Fellows will be awarded up to 26,000 DKK (approx. €3,500). Typically, up to 11,250 DKK (approx. €1,500) can be provided as reimbursement for travel and housing costs. The remaining 14,750 DKK (approx. €2,000) will be disbursed as a one-time payment, which the fellow can use to cover additional costs during the stay. (Note: The payment of 14,750 DKK may count as taxable income in the fellow's country of residence.)

**Application Details:** The application should include the following three documents, totaling two pages plus a CV:

(1) A **project proposal** (max. one page, single-spaced), which outlines the applicant's current philosophical research and explains how this might provide a foundation or starting point for one or more empirical qualitative studies. Please note that the purpose of the fellowship is *not* to carry out the proposed project. Rather, the purpose is to work with members of MoCS to refine the project idea and develop a proposal for external funding applications.

(2) An **information sheet** (max. one page, single-spaced) outlining (a) which MoCS faculty (in addition to A. V. Fernandez) the applicant would like to work with on the development of the project proposal, and how their research overlaps with these faculty; (b) which sources of postdoctoral funding the applicant intends to apply for following the initial fellowship period, including how they meet the eligibility criteria for this funding; and (c) the applicant's current familiarity with qualitative research methods (some familiarity is an advantage but by no means necessary for a successful application).

(3) A **standard CV**, which should include, at a minimum, education, employment, and presentations/publications.

**Deadline:** Applications should be emailed to A. V. Fernandez at [AFernandez@health.sdu.dk](mailto:AFernandez@health.sdu.dk) by **Monday, January 31<sup>st</sup>, 2022**. Decisions will be communicated in mid-February.

For general questions about the fellowship, including eligibility and project ideas, contact A. V. Fernandez. If you have questions about collaborating with other members of MoCS, you may also reach out to them directly. In addition to our full-time faculty, both Giovanna Colombetti (Exeter) and Dan Zahavi (Copenhagen) hold adjunct positions at MoCS and may be able to consult on project proposals, although fellows should plan to work primarily with full-time MoCS faculty.
