Title of the project and your name

(Please make sure that this document covers not more than one page)

Medical background information about the project

Hypotheses of the project

Provide one or two main hypotheses that drive your project and give the conclusions you want to be able to draw after the completion of the experiment.

Thoughts about the statistical aspects

Some idea(s) how you think you would

- design your study
- analyze your collected data statistically. Here you can point out which specific statistical problem the data analysis poses for you.

Strengths and weaknesses

Possible brilliant or problematic features you see in your study.
