

VETERANCENTRET

Neurofeedback training: Theory and emerging perspectives on new treatment methods

*Søren B. Andersen, Ph.D,
Head of National Veterans Research Centre*

History

- 1928 – Hans Berger “EEG – window on the mind”

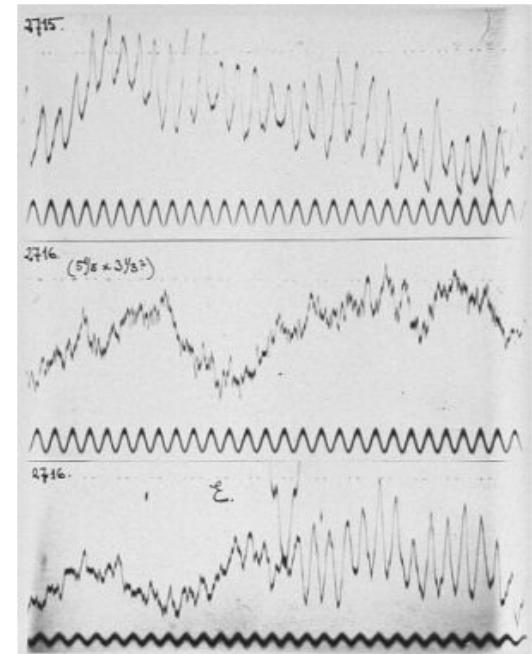

First EEG measurements by Berger around 1928.

Recognized importance of quantification and objectivity in the evaluation of EEG

Theorized abnormalities in the EEG would reflect clinical disorders

Example of EEG recordings by Berger

History

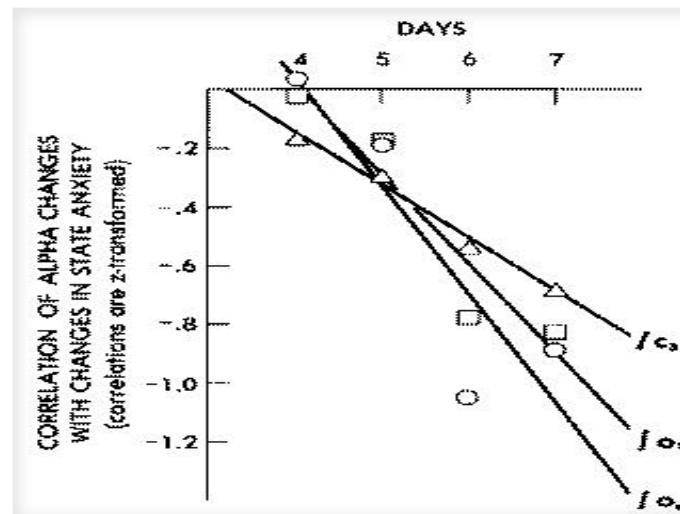

- 1963 – Joseph Kamiya and alpha training

“Anxiety Change Through
Electroencephalographic Alpha
Feedback Seen Only in High Anxiety
Subjects”

James V. Hardt and Joe Kamiya
Science, Vol. 201, pp. 79-81, 7 July 1978

- Recognition of certain brainwave states - alpha
- Self regulated production of alpha
- Demonstrated typical biofeedbackloop – a two way process

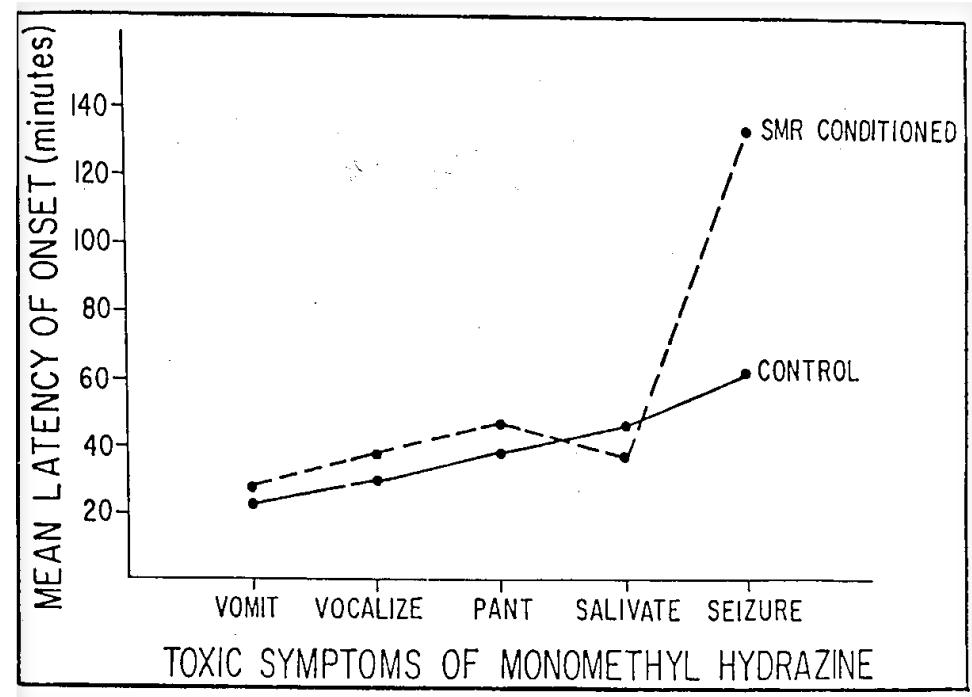

History

- 70s – Barry Sterman and sensorymotorrhythm (SMR training)

“Neurofeedback treatment of epilepsy: from basic rationale to practical application.”

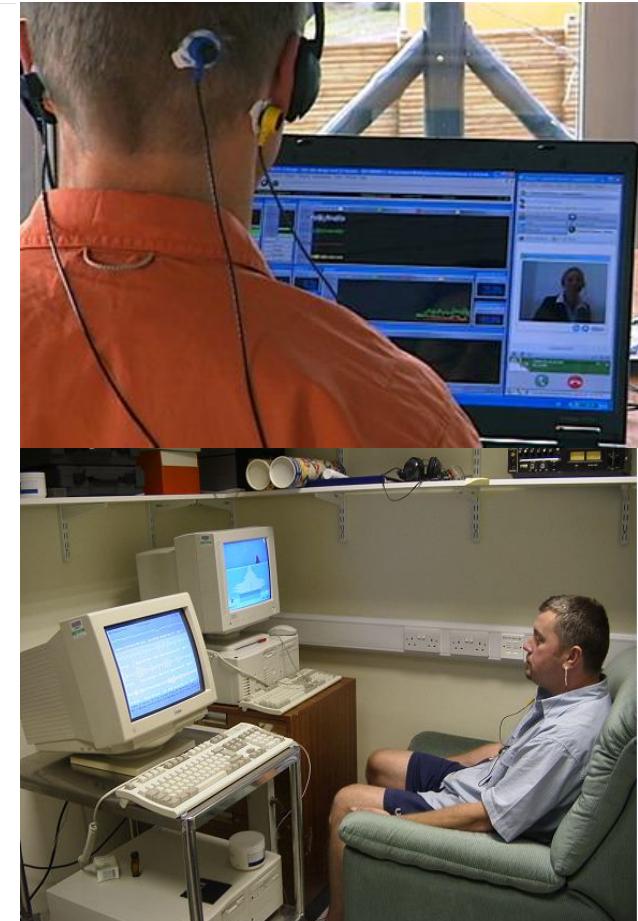

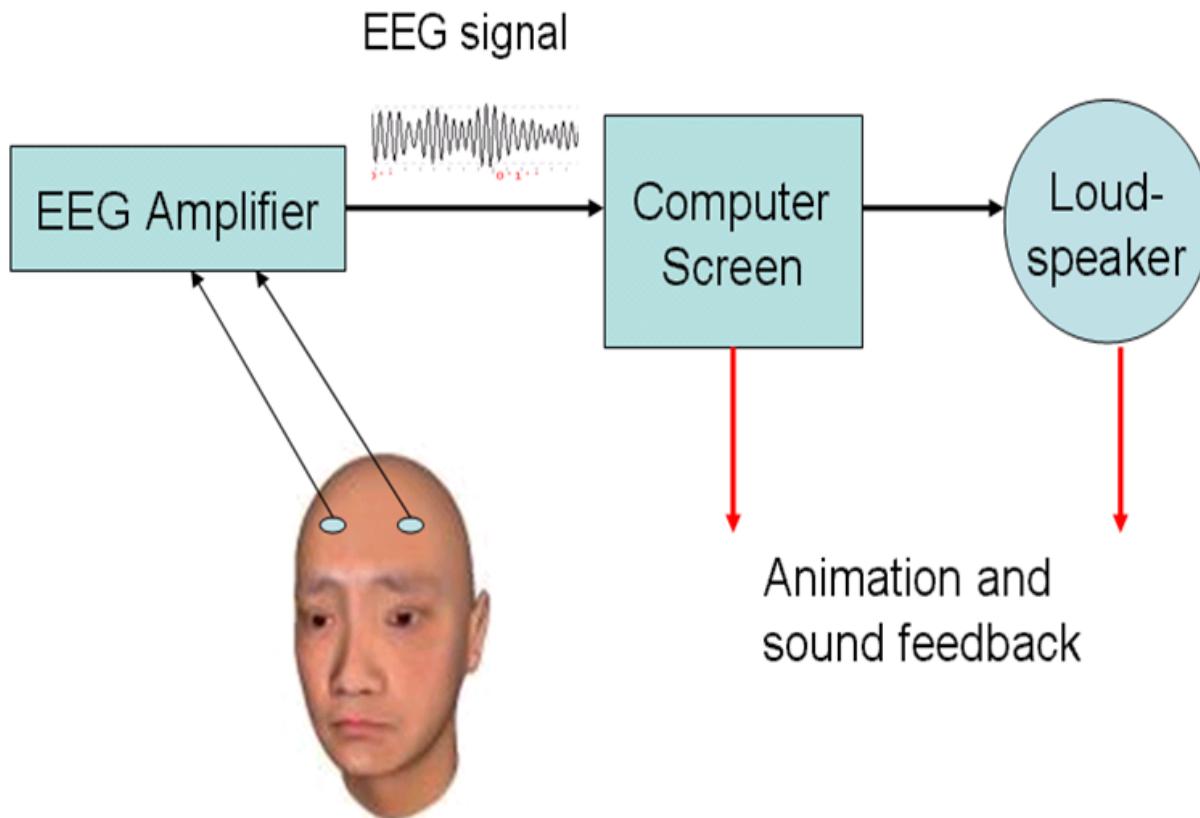

Tobias Egner & M Barry Sterman. Expert Rev. Neurotherapeutics 6(2), 247-257, 2005)

\$500,000 to \$3 million

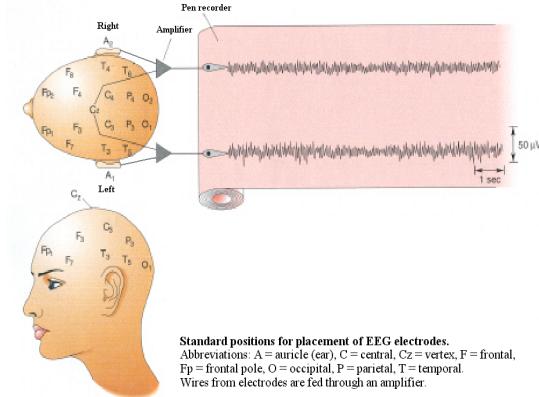

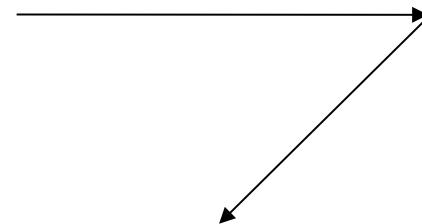

\$10,000 to \$20,000

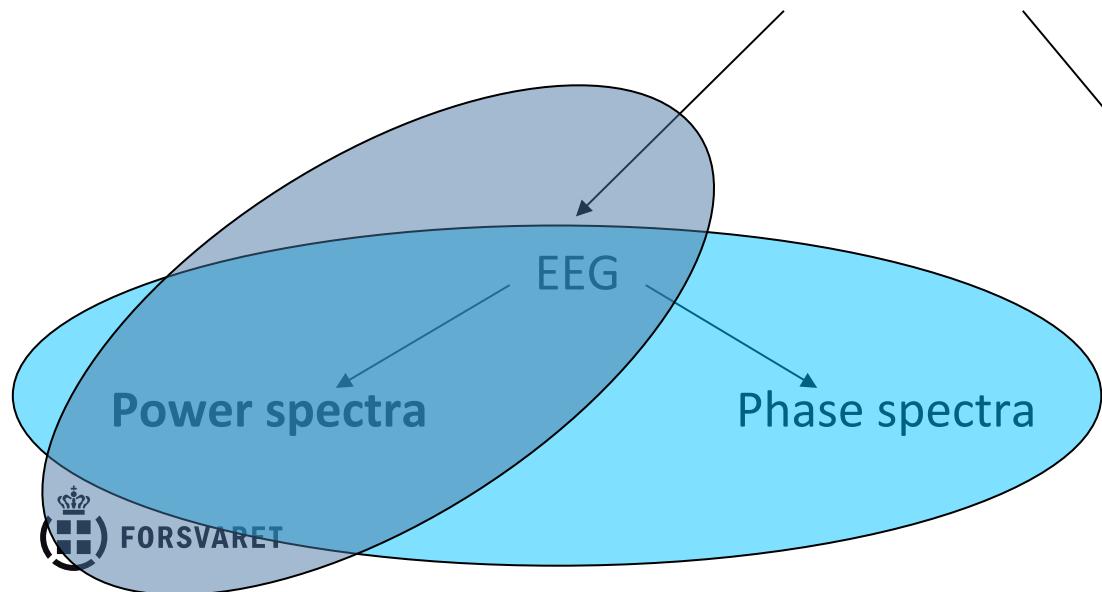

Theory

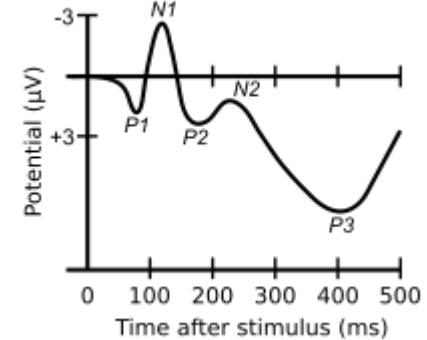

Standard positions for placement of EEG electrodes.
Abbreviations: A = auricle (ear), C = central, Cz = vertex, F = frontal,
Fp = frontal pole, O = occipital, P = parietal, T = temporal.
Wires from electrodes are fed through an amplifier.

Raw EEG

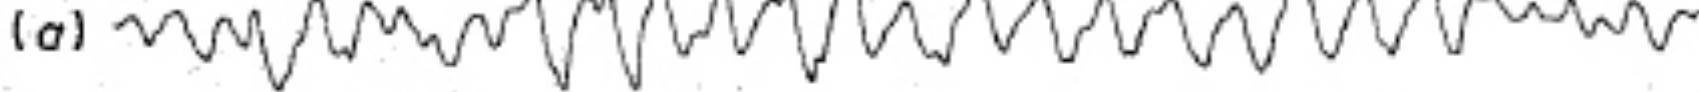

ERP

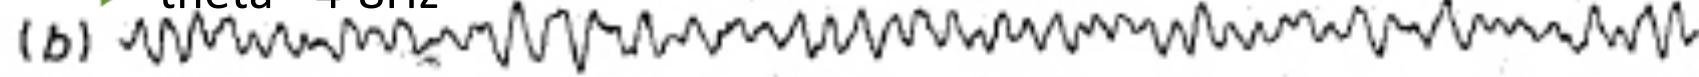

EEG Frequencies

- delta 0.5-4Hz

► theta 4-8Hz

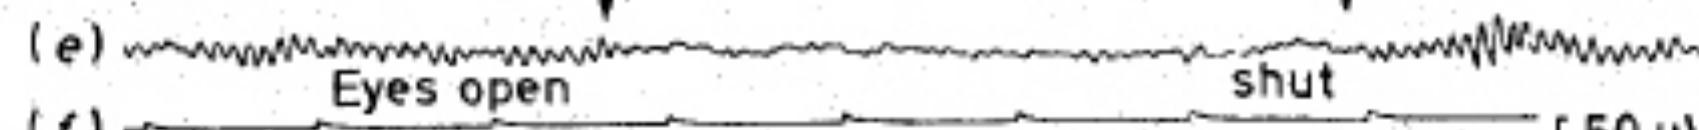

► alpha 8-13Hz

► beta 13-30Hz

► gamma >30Hz

[50 μ V]

Figure 6.3 Examples of (a) delta, (b) theta, (c) alpha and (d) beta activity. (e) Blocking of the alpha rhythm by eye opening. (f) 1 s time marker

Frequency analysis

- Frequency analysis is a key component of the Clinical EEG examination
 - Neurometrics
- Changes in the EEG Frequency Spectrum are seen in:
 - Development and ageing
 - Peak Alpha
 - » 6Hz at 1 year
 - » 8Hz at 3 years
 - » 10Hz at 10 years ± 1Hz
 - » Decline in elderly
 - Neuropathology
 - Psychopathology
 - Levels of consciousness
 - Cognitive Processing
