

data scientists / data consultants join inspari today

At Inspari, we are on a mission to improve decisions for everyone through people and data. And we would like for you to join us. If you share our love of data and our commitment to explore the endless possibilities when combining new and well-established technologies and concepts, you have come to the right place.

To meet the great demand from our customers, we are looking for more consultant colleagues with experience in machine learning and AI – of course always focusing on creating value for our customers.

a great job with significant content

As one of Denmark's most sought-after consultancies within BI & Analytics, we offer our specialist knowledge about Microsoft-based data platform solutions to ambitious companies striving to improve their decision-making power.

In short, we enable our customers to gain insight into their business by uniting people, data and business in areas such as modern BI, data platform, machine learning & AI, IoT analytics, embedded analytics and CFO data advisory. You will be part of a strong team of colleagues who work together to create, implement, grow and support modern data platform solutions in some of the most exciting and visionary companies.

Your job is to identify and create solutions that will help our customers gain valuable insight into their often scattered and noisy data. You will participate in all project phases - from analysis, design, development and testing to deployment based on Inspari's methods. You will have delivery responsibilities on selected projects and through professional coaching and sparring of our clients, you will have constant focus on strengthening their solutions.

(/om-inspari/persondatapolitik/)

do you see yourself in these sentences?

Your current job title is not important to us. If you have a solid understanding of the data needs of the modern data consumers and a passion for creating business value, we are sure you will fit in.

Today, you are considered a true team player with individual qualities. You are proactive, attentive and outgoing, and you easily understand complex business relationships and translate those into solutions creating business value based on the right information architecture.

About you:

A background within Economics, BI, engineering, physics, math or similar.

Hands-on experience with implementing value-creating AI/ML solutions in areas such as churn, predictive maintenance, sales/demand forecasting, recommendation engines, NLP, image classification or similar.

Experience with common ML languages/tools such as python, R, Azure ML, DataRobot, Tensorflow, Alteryx, Databricks etc. – and perhaps a willingness to migrate to the most relevant tools for our clients.

The ability to identify AI/ML possibilities at clients, establish business cases, scope projects and ensure great implementation.

Passionate about creating business value through AI/ML rather than nerding out algorithms.

If you have knowledge about or experience with classic data warehousing and/or leading front-end tools such as Microsoft Power BI, Tableau or Qlik, we are in luck.

if you don't already know inspari...

... please look forward to doing so. We look forward to giving you a warm welcome. At Inspari, we are extremely aware that our success is based on our employees' amazing abilities to take responsibility.

From day 1, you will be introduced to your Buddy - a great colleague, who will help you settle in your everyday life at the office and be your go-to-person especially during your first months with us. We encourage you to be an active part of our culture - both during and outside working hours. Besides the more formal activities such as DHL, our amazing Inspari Summit & Christmas Party and of course the Summer Party, we also do various tastings, SUP, biking, skeet shooting or just a quiet get-together on a Friday afternoon. Please do get excited about being part of our unique Heartwork culture.
